

Securing Hospitals & Medical Centres

Healthcare facilities require a sophisticated and robust Access Control and Security solution to operate 24/7. In situations of life-and-death, the Inner Range system can be relied upon to exceed even the most demanding challenges.

Flexible Security Management Solutions That Have You Covered

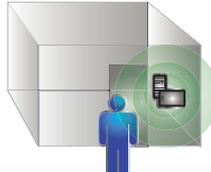

Meeting The Challenge

From the smallest private practice to the largest hospitals, healthcare facilities are unique. Healthcare professionals and patients co-inhabit a hectic working environment where a diverse range of valuable assets must be protected. Drugs, medical equipment and patient records must be secured against theft, vandalism and unauthorised access. A security and access control system must integrate with building automation systems whilst providing security personnel with the eyes and ears required to effectively maintain a safe environment for staff and patients alike.

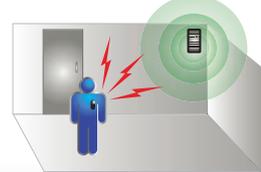

INTRUDER DETECTION

ACCESS CONTROL

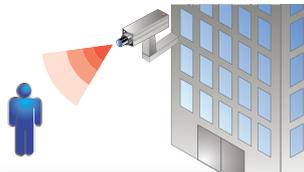

DURESS ALARMS

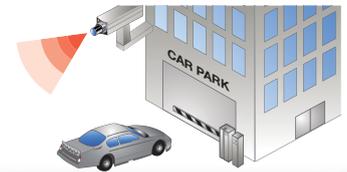

DESIGN AND PRINT CARDS

CCTV AND BUILDING INTEGRATION

VISITORS, CARPARKS AND STORAGE LOCKERS

Keep Your Assets Safe

On every ward, in every wing, the Inner Range system keeps your assets safe. From the most complex medical machinery to the smallest drugs locker, Inner Range lets you control the when, the who and the how of every access. Comprehensive audit trails and full CCTV integration ensures you have a complete picture of everything that's going on in your facility.

Keep Your People Safe

Personal safety is paramount in any healthcare institution. The Inner Range system has the features you need including duress alarms, panic buttons, people counting, door interlocking, anti-passback, CCTV integration, photo ID card printing and more. (Not to mention a comprehensive range of muster reports so you know where your staff are in an emergency.) Talk to us about your requirements and what we can do to help keep your people safe.

Tailor A System To Your Needs

Flexible programming means you can automate nearly any task. For example, when the last staff member leaves a clinic, the Inner Range system can turn off the air conditioning, arm the security system and notify a central monitoring station that the building is unattended.

Reduce Costs

The integration of alarms and access control into a single system delivers compelling advantages: reduced equipment cost, cheaper installation and maintenance, simpler and more practical system management and complementary functionality, to name just a few. Now add ERP and payroll integration, pager and intercom integration, time and attendance, full muster reporting and building services integration (lifts, car parks, storage lockers and more). All in one package!

No Matter How Big Or Small

Many systems struggle to deal with the capacity required to service the number of buildings and offices in a healthcare facility. The few systems that can cope are typically very expensive. The scalable architecture within the Inner Range system is different. From a single clinic to multi-building multi-campus hospitals, the modular design of the Inner Range system means it can grow as you grow. Outstanding value for money and reduced total cost of ownership are provided as a result.

Multi-Site Management

Using our system management software it's possible to manage sites individually, or bring an almost unlimited number of locations together into one system for global administration. User and access management for the entire institution can be handled both centrally or locally, with changes being dynamically updated across the entire facility.

Inner Range have been providing security solutions to the healthcare sector for over 25 years. We have a proven track record with thousands of healthcare facilities throughout the world protected by the Inner Range system. For case studies in the healthcare sector, please visit: www.innerrange.com
